

★ To fight global climate change, we must reduce greenhouse gases like carbon dioxide by 70%

GLOBAL WARMING:

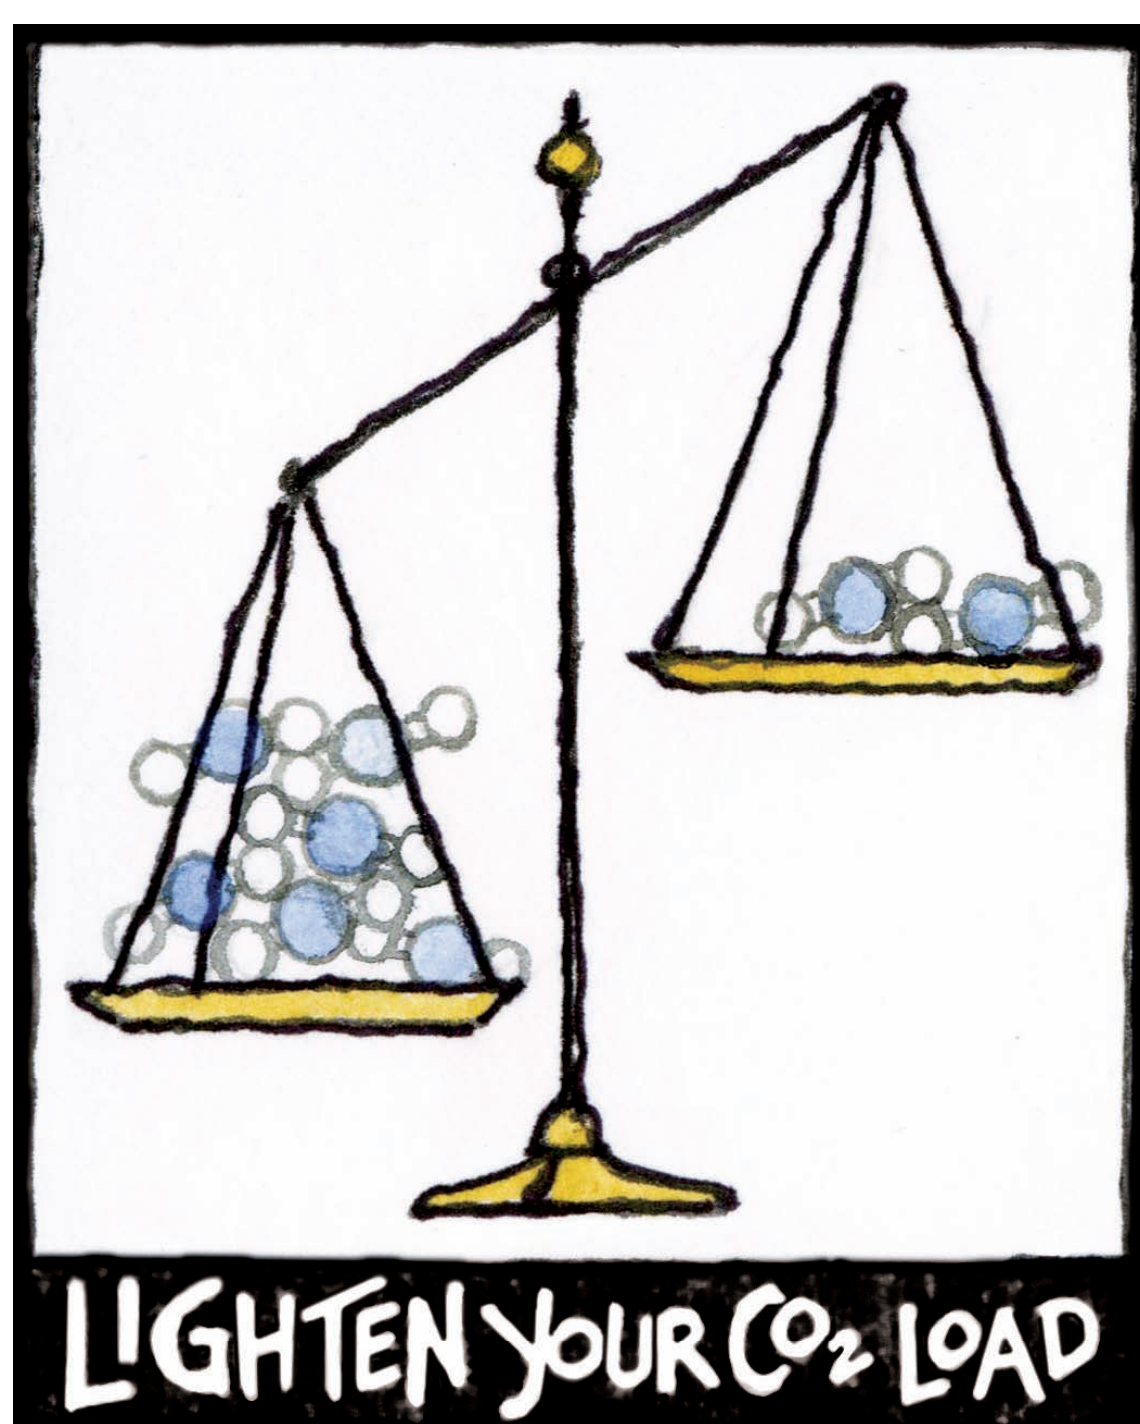

Carbon dioxide (CO₂) is released when fossil fuel burns.

CO₂ and other greenhouse gases trap and radiate heat back to Earth.

Excess greenhouse gases are changing Earth's climate faster than normal.

LET'S COOL IT!

- ★ Conserve energy at home
- ★ Buy green power
- ★ Plant trees
- ★ Use less gas
- ★ Reduce, reuse, recycle
- ★ Educate yourself and others
- ★ Demand political action
